***Supplemental Allowance of Application # 09/788,219***

1. The following communication is in response to applicant's RCE and IDS received 29-September-2004. This application is a CON of 08/912,427, filed on 18-August-1997, now U.S. Patent No. 6,219,628.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the prior art of record, including the information described in U.S. Patent No. 6,226,776 to Panchul et al.. The improvement comprises a system and method for generating a hardware implementation of graphical code, wherein a graphical program including a plurality of nodes is created and at least a subset of the nodes are connected to indicate data flow among the subset of nodes, the nodes including a structure node which represents control of the data flow among the plurality of nodes and is used as the basis for generating a hardware description describing a hardware implementation of the graphical program used to produce a configured hardware element. This patentable distinction is included in each of the independent claims 1, 17, 31 and 47. The art of record fails to teach, suggest, or render obvious the <configuring of a hardware element produced from a hardware implementation of the graphical program, based on a structure node> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 10, line 1 through page 47, line 45, and Figures 1-19. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
